

ELECTRONIC DATA INTERFACE

Overview

The Intech Electronic Data Interface (EDI) application has been designed to simplify the exchange of data between any Intech application and any third party system.

The application provides a standard interface for users to import data from other systems and to export data to other systems. This allows for a seamless transfer of data electronically from different organisations with different data file structures.

Banking interfaces are just one example where EDI can assist with the transfer of data electronically out of the Intech Payroll or Creditors/General Ledger applications. Similarly bank statement data can be imported from your banking system into either the Intech Cash Book or Creditors/General Ledger applications.

Interfaces can be provided to other computer systems such as those operated by your Trading Partners (for example Suppliers, Customers and Freight Companies). Interfaces to your supplier's systems allow for the importing of their price lists and submitting to them electronic orders.

EDI opens up new facilities for your customers to place orders with you electronically and allow you to respond with electronic confirmations and produce labels to your customer's specifications.

Interfaces to your freight carriers using the Intech Despatch application simplifies and speeds up the production of carrier labels, consignment notes and manifests.

In situations where you do not wish to communicate directly with your suppliers or customers Intech has developed special interfaces to third party EDI service providers. Such organisations act as the post box for receiving and despatching electronic data between your Intech application and your Trading Partner.

In summary, the key is that

- ➔ if you have electronic data that you wish to insert into an Intech application – the Intech EDI application can assist you.
- ➔ If you wish to export data out of an Intech application electronically for use elsewhere – the Intech application can assist you.
